Course Overview
This course will focus on preparing pre-service teachers to transfer their current understanding of teaching in one subject matter to the specific pedagogical strategies used in teaching science. We expect that teachers in this course will not necessarily be subject matter experts, therefore they will be drawing on their experience as teachers to apply their understanding to the exciting and wonderful ideas of science. We hope that our teacher candidates might be able to use this course in many ways: to get an additional credential in science, to develop and consider how to teach integrated units connected to science, and/or to increase their knowledge about a different way of thinking as a scientist.

In this intensive introduction to the teaching of science we expect students:
- To read and interpret the Next Generation Science Standards (NGSS) in order to effectively plan learning experiences in science content.
- To design and present their rationale for teaching a lesson plan in a scientific area, which eventually, would lead to planning learning segments and unit plans based on students’ skills, backgrounds and needs.
- To analyze and assess pre-assessments for/of student learning in an effort to create, revise and improve their classroom instruction.
- To compare and contrast the teaching of science with their understanding of teaching in another content area.
- To consider how their own positionality affects their teaching practice and what this looks like in science classes.
- To connect science to social justice and sense of place in order to support student engagement.

Course Expectations
This course is designed to create a collegial culture in which we can all learn from one another. To facilitate this culture - especially with distance learning, we expect everyone to come to class having completed the readings for that session and to be prepared to participate in activities and discussions. Candidates are expected to demonstrate the same level of professionalism as demanded of any credentialed teacher with respect to time management, communication, and integrity. We also expect people to listen carefully and respectfully to their colleagues. Our collective engagement in class activities and discussions will facilitate your learning; we
therefore assume regular attendance. All assignments will be used in class on the day they are due, so you will need to have them ready to upload by the start of class.

**Course Assignments (due for use in class on the date listed)**

<table>
<thead>
<tr>
<th>Assignment</th>
<th>Due Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Teach us something assignment</td>
<td>Days will vary</td>
</tr>
<tr>
<td>Video analysis</td>
<td>In class (if you miss class there will be makeup)</td>
</tr>
<tr>
<td>Final Project (plus sharing on last day)</td>
<td>June 1</td>
</tr>
</tbody>
</table>

**Meeting Times**

Class will meet for 10 consecutive weeks on Tuesdays in the block of time between 3:30-6:20pm over Zoom; March 30 - June 1, 2021. There will be both synchronous and asynchronous activities for each class session.

**Grading**

Our expectation is that everyone will achieve mastery of the material taught in the course. To that end, we will invite you to revise and resubmit assignments in a timely manner if mastery is not the outcome upon the first submission. The other major component of the grade is participation and engagement during class time. Please read each week’s reading carefully and fully before coming to class and have it readily accessible during each class. Assignment extensions will be granted, if requested.

**Students with Documented Disabilities**

Students who may need an academic accommodation based on the impact of a disability must initiate the request with the Office of Accessible Education (OAE). Students should contact the OAE as soon as possible since timely notice is needed to coordinate accommodations.

**Honor Code**

1. The Honor Code is an undertaking of the students, individually and collectively:
   a. that they will not give or receive aid in examinations; that they will not give or receive unpermitted aid in class work, in the preparation of reports, or in any other work that is to be used by the instructor as the basis of grading;
   b. that they will do their share and take an active part in seeing to it that others as well as themselves uphold the spirit and letter of the Honor Code.

2. The faculty on its part manifests its confidence in the honor of its students by refraining from proctoring examinations and from taking unusual and unreasonable precautions to prevent the forms of dishonesty mentioned above. The faculty will also avoid, as far as practicable, academic procedures that create temptations to violate the Honor Code.

3. While the faculty alone has the right and obligation to set academic requirements, the students and faculty will work together to establish optimal conditions for honorable academic work.

**Violations of the Honor Code**

Examples of conduct that have been regarded as being in violation of the Honor Code include:

- Copying from another’s examination paper or allowing another to copy from one’s own paper
- Unpermitted collaboration
- Plagiarism
- Revising and resubmitting a quiz or exam for regrading, without the instructor’s knowledge and consent
- Giving or receiving unpermitted aid on a take-home examination
- Representing as one’s own work the work of another
- Giving or receiving aid on an academic assignment under circumstances in which a reasonable person should have known that such aid was not permitted

### COURSE CALENDAR

<table>
<thead>
<tr>
<th>Date</th>
<th>Topic</th>
<th>Readings for this class</th>
</tr>
</thead>
<tbody>
<tr>
<td>Day 1: 3/30</td>
<td><strong>Introductions</strong></td>
<td>None for before class</td>
</tr>
<tr>
<td></td>
<td>- How is scientific thinking different?</td>
<td>Resources for later</td>
</tr>
<tr>
<td></td>
<td>- Goals for ourselves and the course</td>
<td>How to Read the Next Generation Science Standards. Video resource</td>
</tr>
<tr>
<td></td>
<td>- Science time - how do we know? And creating a sense of place</td>
<td><a href="http://www.nextgenscience.org/resources/how-read-next-generation-science-standards">http://www.nextgenscience.org/resources/how-read-next-generation-science-standards</a></td>
</tr>
<tr>
<td></td>
<td>- How are the current science standards organized and how do you read them?</td>
<td>After Class: Review the section of the chapter of the recently adopted CA State Science standards that you are most interested in. Chapter 7: Three course model The Living Earth pg 11-122 Chemistry in the Earth System pg 123-219 Physics in the Universe pg 220-343 Chapter 5: Middle School, integrated science</td>
</tr>
<tr>
<td></td>
<td>- How have the opinions of teachers and society changed over time and changed our focus on how and what to teach in science classrooms?</td>
<td>Ambitious Science Teaching - An Overview</td>
</tr>
<tr>
<td></td>
<td>- Science Time</td>
<td>Assignment: <a href="#">Plan for my final project and sign up for a teach day</a></td>
</tr>
<tr>
<td></td>
<td>- A vision for science instruction, your own positionality and one idea of how through Ambitious Science Teaching</td>
<td></td>
</tr>
</tbody>
</table>
| Day 3: 4/13 | **Asking Questions: Context in Science**  
- What do students wonder about science in their everyday lives?  
- How does where we are and what we already know affect our science learning?  
- How do we choose effective phenomena? | These first two readings are both about the Question Formulation Technique, but with slightly different formats, read until you feel like you have a good idea about how QFT works: [The Right Questions](https://www.nplg.org/library/educational-leadership-the-right-questions). By Dan Rothstein and Luz Santana. Educational Leadership.  
NPR Story: [How Helping Students To Ask Better Questions Can Transform Classrooms](https://www.npr.org/sections/ed/2018/05/21/630828209), Published 5/21/18  
This podcast talks about our relationship with place from an indigenous perspective, you can also find something else to read about Kimmerer:  
Podcast: [NPR’S ON BEING: Robin Wall Kimmerer — The Intelligence of all Kinds of Life | ON BEING](https://www.npr.org/sections/thetopic/2017/09/18/553805627)  
Additional Resources:  
[Using Phenomenon in NGSS – linked](https://www.nextgenscience.org/pheno-mic-content), from the NGSS website  
| --- | --- |
| Day 4: 4/20 | **How does it all fit together? Crosscutting Concepts and Disciplinary Core Ideas:**  
- How are the 3 dimensions of science woven together to make a stronger science education?  
- Why is it important to know the wrong answers? or How can you find the right in the wrong answers?  
NPR Story: [Why Teachers Need to Know the Wrong Answers?](https://www.npr.org/sections/beatingthe钟/2018/04/30/630828207)
