

ED 262D | Spring 2017 Elective **CURRICULUM & INSTRUCTION IN SCIENCE**

Catherine Lemmi
clemmi@stanford.edu

Polly Diffenbaugh
CERAS 313
pdiffenbaugh@stanford.edu

Course Overview

This course will focus on preparing pre-service teachers to plan learning segments (and curricular units) to be used for science teaching. We expect that teachers in this course will not necessarily be subject matter experts, but they will still be expected to use their knowledge of teaching to transfer to science content.

Specifically, in this intensive introduction to the teaching of science we will endeavor:

- To convey and practice the cognitive apprenticeship model as we understand it in the context of science teaching.
- To be able to read and interpret the NGSS in order to effectively plan effective learning experiences in science content.
- To prepare all pre-service teachers to design lesson plans, learning segments, and eventually, curricular units, that create deeply integrated learning segments that enable students to understand and apply their conceptual understanding based on their understanding of students' skills, backgrounds and needs,
- To prepare all students to analyze and assess the impact of their planning strategies on student learning in an effort to revise and improve their instructional performance.

Course Expectations

This course is designed to create a collegial culture in which we can all learn from one another. To facilitate this culture, we expect everyone to come to class having completed the readings for that session and to be prepared to participate in activities and discussions. Candidates are expected to demonstrate the same level of professionalism as demanded of any credentialed teacher with respect to time management, communication, and integrity. We also expect people to listen carefully and respectfully to their colleagues. Our collective engagement in class activities and discussions will facilitate your learning; we therefore assume regular attendance. Absences are for major illness or family emergencies only. In such instances, students are responsible for contacting instructors at least 24 hours before class and completing any work missed due to absence. All readings will be available on Canvas. Missing more than one class session may result in a grade reduction.

Course Assignments

Video capture of student think-aloud
Cross-content observation slideshow
Lesson plan presentation

due April 18
due May 16
due June 6

Grading

Our expectation is that everyone will achieve mastery of the material taught in the course. To that end, we will invite you to revise and resubmit assignments in a timely manner if mastery is not the outcome upon the first submission. The other major component of the grade is participation and engagement during class time. Please read each week's reading carefully and fully before coming to class and have it readily accessible during each class. Because of your edTPA, job search, and independent student teaching in the spring, we have limited the readings significantly (typically only one per week or two shorter pieces each week) to ensure that this elective is manageable considering all of your other

obligations in the spring. Assignment extensions may be granted by your instructors, if requested. Late work that is submitted without an extension may be subject to a grade reduction.

Students with Documented Disabilities

Students who may need an academic accommodation based on the impact of a disability must initiate the request with the [Office of Accessible Education \(OAE\)](#). Students should contact the OAE as soon as possible since timely notice is needed to coordinate accommodations.

Honor Code

1. The Honor Code is an undertaking of the students, individually and collectively:
 - a. that they will not give or receive aid in examinations; that they will not give or receive unpermitted aid in class work, in the preparation of reports, or in any other work that is to be used by the instructor as the basis of grading;
 - b. that they will do their share and take an active part in seeing to it that others as well as themselves uphold the spirit and letter of the Honor Code.
2. The faculty on its part manifests its confidence in the honor of its students by refraining from proctoring examinations and from taking unusual and unreasonable precautions to prevent the forms of dishonesty mentioned above. The faculty will also avoid, as far as practicable, academic procedures that create temptations to violate the Honor Code.
3. While the faculty alone has the right and obligation to set academic requirements, the students and faculty will work together to establish optimal conditions for honorable academic work.

Violations of the Honor Code

Examples of conduct that have been regarded as being in violation of the Honor Code include:

- Copying from another's examination paper or allowing another to copy from one's own paper
- Unpermitted collaboration
- [Plagiarism](#)
- Revising and resubmitting a quiz or exam for regrading, without the instructor's knowledge and consent
- Giving or receiving unpermitted aid on a take-home examination
- Representing as one's own work the work of another
- Giving or receiving aid on an academic assignment under circumstances in which a reasonable person should have known that such aid was not permitted

COURSE CALENDAR

Date	Topic	Readings for this class
Day 1: 4/4	Introductions - How is scientific thinking different? - How are the current science standards organized and how do you read them?	Osborne, J. (2011). Science teaching methods: a rationale for practices. <i>School Science Review</i> , 93(343), 93-103. How to Read the Next Generation Science Standards. Video resource http://www.nextgenscience.org/resources/how-read-next-generation-science-standards Additional Resource/Reference: A Framework for K-12 Science Education: Practices, Crosscutting Concepts, and Core Ideas. Chapters 2 and 3.
Day 2: 4/11	Why teach Science? - How have the opinions of teachers and society changed over time and changed our focus on how and what to teach in science classrooms?	Wysession, Michael. Why schools should teach science like sports. <i>Scientific American</i> . August 1, 2105 Why is Science Important? Website http://whyscience.co.uk/
Day 3: 4/18	Asking Questions: Context in Science - What do students wonder about science in their everyday lives? - How does where we are and what we already know effect our learning in science? -How do we choose effective phenomenon? Assignment Due: Survey your students.	Phenomenon for NGSS Using Phenomenon in NGSS Website https://www.ngssphenomena.com/ Additional Resource: Barton, A. C. (2002). Urban science education studies: A commitment to equity, social justice and a sense of place, <i>Studies in Science Education</i> , 38(1), 1-37.
Day 4: 4/27 Class moved to Thursday!!	How does it all fit together? Cross cutting Concepts and Disciplinary Core Ideas: - How are the 3 dimensions of science woven together to make a stronger science education? - Why is it important to know the wrong answers? or How can you find the right in the wrong answers? -What is the role of backwards planning in science?	A Framework for K-12 Science Education: Practices, Crosscutting Concepts, and Core Ideas. Peruse Chapter 4: Dimension 2 Cross Cutting Concepts And review the section of the chapter of the recently adopted CA State Science standards that you are most interested in. Chapter 7 (chapter 5 is middle school) The Living Earth pg 11-122 Chemistry in the Earth System pg 123-219 Physics in the Universe pg 220-343
Day 5: 5/2	Language and Literacy in Science: - How do we support the development of scientific literacy? - What are some reading strategies we can use to support our students as they read scientific text? - What are the 'talk moves' and how can we utilize them in our classroom?	Brown, B. A., & Ryoo, K. (2008). Teaching science as a language: A "content-first" approach to science teaching. <i>Journal of Research in Science Teaching</i> , 45(5), 529-553. Additional Resources: Talk Science Primer Norris, S. P., & Phillips, L. M. (2003). How literacy in its fundamental sense is central to scientific literacy. <i>Science education</i> , 87(2), 224-240. Wellington, J. & Osborne, J. (2001) <i>Language and Literacy in Science Education</i> . London, UK: Open University Press

<p>Day 6: 5/9</p>	<p>Defining Problems and Designing Solutions: What is Design Thinking in Science?</p> <ul style="list-style-type: none"> - What types of problems can we solve with science and engineering? - How can we facilitate activities for answering a scientific question or proposing a solution to a problem? 	<p>Lahey, Jessica. How Design Thinking became a buzzword at school. The Atlantic. January 4, 2017. https://www.theatlantic.com/education/archive/2017/01/how-design-thinking-became-a-buzzword-at-school/512150/</p> <p>Morrison, Debbie. Why 'Design Thinking' doesn't work in education. Online Learning Insights. August 6, 2013. https://onlinelearninginsights.wordpress.com/2013/08/06/why-design-thinking-doesnt-work-in-education/</p> <p>Design Thinking for Educators Website https://designthinkingforeducators.com/</p>
<p>Day 7: 5/16</p>	<p>Modeling and Interpreting Data:</p> <ul style="list-style-type: none"> - What is considered a model in science? - When do we interpret data in real life? What counts as data? <p>Assignment Due: Cross Content Observation</p>	<p>Schwarz, C. V., Reiser, B. J., ... (2009). Developing a learning progression for scientific modeling: Making scientific modeling accessible and meaningful for learners. Journal for Research in Science Teaching. 46(6), 632-654.</p> <p>Modeling: Allowing Students to Show What they Know. Tools for Ambitious Science Teaching.</p>
<p>Day 8: 5/23</p>	<p>Discourse and Argumentation:</p> <ul style="list-style-type: none"> - Why argumentation and why in science? - Why is it important to look at misconceptions and to talk in science? 	<p>Osborne, J. (2010). Arguing to Learn in Science: The Role of Collaborative, Critical Discourse. Science, 328, 463-466.</p> <p>Additional Resources: TedED: Derek Muller, The founder of Veritasium. Video series. http://ed.ted.com/on/rTahZlkM#watch Hanford, Emily. American Radio Works. Don't Lecture Me. Fall 2011. http://americanradioworks.publicradio.org/features/tomorrows-college/lectures/</p> <p>Chin, C. (2006). Classroom interaction in science: Teacher questioning and feedback to students' responses. International journal of science education, 28(11), 1315-1346.</p>
<p>Day 9: 5/30</p>	<p>Science and Society:</p> <ul style="list-style-type: none"> - What is going on with science and society? - When do we think about science and how does this connect to scientific literacy and why it would be important? - Where do people learn science outside the classroom? 	<p>Falk, J., & Dierking, L. (2010). The 95 Percent Solution: School is not where most of Americans learn most of their science. American Scientist, 98, 486-493.</p> <p>Vedantam, Shankar. NPR. March 14, 2017. Why piling on facts may not help in the battle against fake news. (audio news story)</p> <p>Additional Resource: Lucas, A. M. (1983). Scientific literacy and informal learning. 1-36.</p>
<p>Day 10: 6/6</p>	<p>Lesson Plan Project Sharing</p> <p>Assignment Due: Final lesson project</p>	<p>Refer to assignment sheet for lesson plan enactments</p>
